

Bio-security Policy & Practice

Footprint Ecology is run by committed conservationists. As such we must guard against spreading disease or invasive non-native species during our business activities.

To achieve this aim we will:

- Risk assess fieldwork activities for bio-security hazards.
- Ascertain measures to mitigate those risks.
- Ensure fieldworkers are aware of and equipped for those risks and mitigations.
- Ensure vehicles, boots and clothing are cleaned between areas.
- We will build a database of best practice for particular habitat types, eg forestry, freshwater etc.
- We have signed up to the Dorset 'Return of the Natives' pledge to prevent the spread of non-native invasives in freshwater habitats.

A handwritten signature in black ink, appearing to read 'Jurye L', is centered within a light blue rectangular box.
